Welcome to Hamsa Rehab E-Newsletter

It is with immense pride and great pleasure that we congratulate our dedicated physiotherapy doctors and nursing staff for their outstanding achievement in the Physiotherapy Week Celebrations, 2024. Physiotherapy, Speech, and Occupational Therapy play a crucial role in the rehabilitation of patients with neurological disorders. Their expertise and compassionate care have been instrumental in helping countless patients regain lost abilities and improve their quality of life.

September is also National Cerebral Palsy Awareness Month. It aims to acknowledge the daily challenges faced by individuals with cerebral palsy and their families, and to promote greater understanding, inclusion, and support. Our Hamsa Rehab, we recognize that every step, however small, is a victory worth celebrating. We are committed to providing the highest quality of care and support to all our patients, and we are proud of the progress they have made.

We would like to thank all the healthcare professionals and volunteers at our premises, who have worked tirelessly to make this event a success. Your dedication and hard work are truly inspiring, and we are grateful for your contributions.

The Hugs to Be Saved on Tiptoes will contribute to the construction of a new rehabilitation center for children with cerebral palsy.

Inspired Gathering is our Christian family.

Sandra Kumar
Chief Executive Officer

EVENT HIGHLIGHTS

HAMSA Rehab

2nd October - World Smile Day ** – Chennai
Hamsa Rehab Day celebrations

30th October - Cerebral Palsy Day ** – Chennai

Hugs to be Saved on Tiptoes is a fundraising initiative with resources for construction of a rehabilitation center for children with cerebral palsy.

CEREBRAL PALSY

Cerebral palsy (CP) is a group of neurological disorders that affect movement, balance, and posture. It is the most common motor disability in childhood. Cerebral palsy is caused by abnormal brain development or damage to the developing brain that affects the ability to control muscles.

All people with CP may have difficulty with fine motor skills, such as writing or keeping their hands upright.

Some people with CP may have problems with vision, hearing, or speech. Others may have difficulty in thinking.

Recreation Activities
Recreation activities are important for a healthy child, patient, etc., and enhance their sense of fitness. It is vital for the patient to participate in recreation activities to improve their physical and mental health.

1st October – Vettuvanam – Trichy

WAKE UP CALL: PRIORITIZING SLEEP FOR A HEALTHIER WORKPLACE

Did you know that India is considered the second most sleep-deprived country after Japan? Poor sleep quality signals a "dangerous trend" as it is directly linked to mental health. Over 62% of Indians get less than six hours of uninterrupted sleep each night, a situation that has worsened since COVID-19

According to the International Classification of Sleep Disorders, most sleep disorders are characterized by one or more of the following symptoms: excessive daytime sleepiness, difficulty initiating or maintaining sleep, or abnormal movements, behaviors, and sensations during sleep.

The health risks associated with sleep deprivation and sleep disorders are serious, including an increased risk of heart attack, stroke, diabetes, obesity, depression, and hypertension.

Sleep loss can be caused by lifestyle factors or by sleep disorders. One major cause is societal changes, such as workdays, shift work, and increased screen time, including TV and internet usage. Adults are sleeping less in an effort to keep up with work, often staying up later to browse the Internet or watch television.
Health Outcomes of Chronic Sleep Deprivation Included

- Obesity in adults and children
- Diabetes and impaired glucose tolerance
- Cardiovascular disease and hypertension
- Anxiety symptoms
- Depressed mood
- Increased alcohol use

The Impact of Sleep Deprivation on Work Performance

Working while sleep-deprived can significantly impact job performance. Sleep deprivation disrupts the body's ability to function, leading to short-term effects that impact the workday, including:

- Difficulty staying focused, attentive, and vigilant
- Reduced cognitive speed or errors due to impaired reaction times
- Difficulty with day engaged in meetings, taking longer to complete tasks, and diminished productivity
- Emotional changes that can strain workplace relationships
- Impaired perception, judgment, and decision-making abilities

Recommendations for Promoting Better Sleep:

- Maintain a consistent sleep schedule by waking up at the same time each day
- Follow a relaxing bedtime routine
- Make the bedroom quiet and relaxing
- Turn off electronic devices at least 30 minutes before bedtime
- Eat a healthy diet
- Avoid large meals, caffeine, and alcohol before bed

Healthcare Workers and Sleep:

Healthcare workers can improve their sleep quality by

- Creating a comfortable sleep environment
- Reducing screen time
- Managing stress with relaxation techniques
- Practicing good sleep hygiene
- Setting boundaries by mentally detaching from work after clocking out

The Role of Therapy in Addressing Sleep Issues

Therapy can help manage sleep loss by addressing the underlying beliefs and habits that fuel sleep problems. Evidence-based modalities like relaxation therapy, mindfulness-based stress reduction, and cognitive behavioral therapy (CBT) are widely used to improve sleep quality.

OCCUPATIONAL THERAPY FOR ALL

PRODUCTIVE LIVING: OCCUPATION, a fundamental necessity of livelihood, is of higher need. Be it a wish, interest, or choice for the sake of an individual's physical, and psycho-social well-being for a productive and independent living. The relationship between our work and the challenges we face within it are least recognized. And so is the priority and a chance to outlook on getting back to work after a disability. It has to be made practically approachable and attainable. A gap in the knowledge of healthcare professionals working in various fields of science work for persons with disabilities to elevate their everyday lives.

OCCUPATIONAL THERAPY: NEED FOR ALL

One among the health care professionals working on people with disabilities are Occupational therapists. Occupation as a valuable tool in creating better opportunities for individuals. By focusing on safety, recovery, and rehabilitation, occupational therapists engage individuals in goal-oriented activities that help them regain independence and return to their daily roles. This requires the use of the latest evaluation techniques, education, and personalized treatment interventions, ensuring optimal health and well-being for patients of all age groups. Whether facilitating recovery or promoting long-term wellness, occupational therapy remains at the forefront of enhancing the quality of life through purposeful and productive engagement.

EVOLUTION: PRACTICAL IMPLEMENTATION OF PRACTICE

Occupational therapy spans all stages of life, beginning with infants in neonatal units, where therapists support early development. In young children, OT addresses developmental disorders and neurological conditions, focusing on enhancing cognitive and motor function. For children with neurodevelopmental deficits, OT plays a vital role in improving sensory processing and addressing sensory challenges.

As individuals grow, OT supports adults in recovering from and managing chronic illnesses, while promoting participation in daily life for those facing mental health challenges that impact productivity and quality of life. For those with musculoskeletal disorders, occupational therapists provide interventions like hand therapy, splinting, and assistive technology to restore function and independence.

OT also assists differently-abled individuals through retaining functional abilities and vocational skills, helping them achieve greater independence. For elderly individuals, OT offers cognitive support, adaptive living strategies, and environmental modifications to enhance safety and comfort. Whether through home adjustments or ergonomic solutions in the workplace, occupational therapists work to ensure accessibility and support well-being at every life stage.

NEW EXPLORATION IN SCIENCE: RESEARCH AND ADVANCEMENTS

We also embrace the new fields of science that occupational therapy has expanded onto to provide effective and innovative solutions and interventions through ongoing research on neuroplasticity, genetics, virtual reality, artificial intelligence, and brain-computer interface technologies by letting therapists work on the adaptation to recover motor and cognitive functions.

By leveraging these advancements, occupational therapy is poised to redefine recovery, empowering individuals to reclaim their with renewed strength and resilience.

OCCUPATIONAL JUSTICE: BUILD A RESPONSIVE COMMUNITY

On being part of a very responsible community that encourages a supportive society I still question myself as

IS OCCUPATIONAL JUSTICE TRULY BEING SERVED FOR EVERY INDIVIDUAL? DO WE PROVIDE EQUITABLE ACCESS AND OPPORTUNITIES FOR PURPOSEFUL AND PRODUCTIVE LIVES? GIVEN THE EXISTING INEQUITIES IN OUR ENVIRONMENT, HOW CAN WE BETTER ADVOCATE FOR INCLUSION AND EQUITY?

It's still a question, and it continues to be one. Let this be a reminder for all of us to examine how we can make physical spaces, housing, education, work, and access to care more approachable. Together, we can serve our advocacy efforts better.

OCTOBER BIRTHDAY BASH

Wishing Happy Birthday To Our Fantastic October Folks
